</dancik-api-request>
```

Example (JSON) :

```
{
  "months": " XXX ",
  "sortby": " XXX ",
  "sortdir": " XXX ",
  "start_row": " XXX ",
  "rows_per_screen": " XXX "
}
```

Outputs :

Layout name : releasedorders

Variable	Type	Description
order_number		
account_name		
operator_user		
date_held		
sort_held		
date_released		
sort_released		
days_onhold		
collect_amount		
order_total		
printed		
company_num		
account_num		
co_acct		
parent_account		

Example (XML) :

```
<dancik-api-response>
  <releasedorders>
    <order_number> XXX </order_number>
    <account_name> XXX </account_name>
    <operator_user> XXX </operator_user>
    <date_held> XXX </date_held>
    <sort_held> XXX </sort_held>
    <date_released> XXX </date_released>
    <sort_released> XXX </sort_released>
    <days_onhold> XXX </days_onhold>
  </releasedorders>
</dancik-api-response>
```

Example (JSON) :

```
{
  "releasedorders": {
    "order_number": " XXX ",
    "account_name": " XXX ",
    "operator_user": " XXX ",
    "date_held": " XXX ",
    "sort_held": " XXX ",
    "date_released": " XXX ",
    "sort_released": " XXX ",
    "days_onhold": " XXX "
  }
}
```
