Enhance SSM to use BillTo Accounts (Spec 4835)

> *Note:*   *This enhancement requires a one time population of the Retail File with BillTo data. This upload has to be requested from and done by Dancik.*

> *Note:*   *After the initial conversion of Billto Accounts to Retail accounts, a trigger program (BILLTO) is activated by Dancik. This trigger program ensures any changes or additions to the Billto accounts is transferred to the Retail file.*

When Selection Sheet Manager was originally designed, it was based off the use of Retail Customer Accounts. This enhancement allows SSM to use Billto Accounts as well.

When a billto account is used, a "virtual" retail account is created. This virtual retail account is linked to its associated bill account. Essentially the company and account (BCO# BACCT#) is copied over from the Billto account and assigned a Retail ID (RCID#).
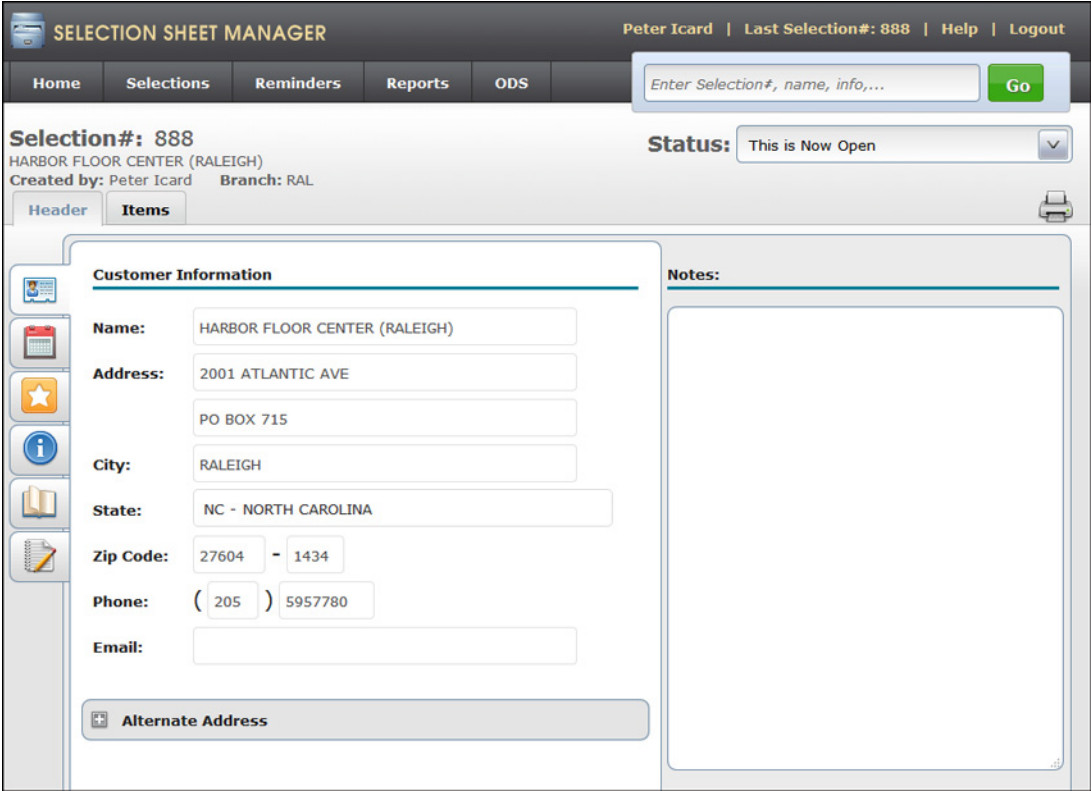

> *Note:*   *These "virtual" retail accounts are set-up on the green screen only. They are not accessible in Navigator. Furthermore, sales are not record against the "virtual" retail account.*

Working with Billto Accounts in Selection Sheet Manager

Billto Accounts are handled essentially the same as retail files in SSM. However there are a few differences.

Customer Information

The customer information is not editable on Billto Accounts. The fields are not accessible.

Buyers Account Number

The default buyer's account number from the Billto Account is imported into the References section of the Header.

Note: *The search icon is also removed.*

If the billto account does not have a default buyers account, the field is left blank.

Affects on other Parts of the System

- Accounts are not duplicated in either the green screen or Navigator.
- Virtual accounts are not included on Green Screen customer searches.
- Virtual accounts are not displayed in Navigator.
